4 required Connects(176 available) ?

The idea is to provide data so that it can be used to publish on a news website to show how expensive UK gaming is compared to other places.

Requirements:

You will create a basic front end, using a UI kit ideally that you are familiar with to speed things up.

The data will be pulled using <https://steamapi.xpaw.me/>

I need a basic webpage tool to populate current prices of steam games in Uk, Russia and Argentina similar to this <https://steamdb.info/stats/gameratings/> but with prices added and something to show which country has the cheapest price for the games. Some basic filters should be added also.

I can provide further details as required

\$100

Fixed-price
