Hello,

I am looking to develop a website with the same purpose and functionalities at this website <https://stadtsalat.de/hamburg> The website will be selling salads, bowls and bagels.

It must be developed in a similar software as well, so if the customer want to sell the website in some years, he can do that without any copyrights or similar.

There is some very important functionalities to be aware of:

- first thing a customer must do when entering the site is to enter their post code
- if we deliver to the entered postcode, the customer will be able to chose home delivery at the checkout
- if we do not deliver to the entered postcode, the customer can pay and chose pickup time slot
- the customer can chose to create their own salad or bowl from scratch
- the customer will also be able to create their own bagel from scratch
- functionalities must be exactly the same as <https://stadtsalat.de/hamburg>

If you want to be considered to the job, please write FashionB as the first thing in the description, so i know you have read the job description.

good luck!
