This project was done few weeks agao, but I am not happy with the results as I am getting too many bugs, so I need to do it again. It is crucial for the addin to be compatible on all computers (windows) no matter what. So please keep this in mind while developing it.

I am an analyst and every month I have to update/create a lot of charts (currently about 2000). I would like to improve my workflow, hence my request for an Add-in.

It's a project I see to be executed in different phases.

- 1) Phase 1 - Export Charts
- 2) Phase 2 - Create a chart designing tools (I don't like how excel work for this)
- 3) Phase 3- Add analysis capabilities

Right now, I only want to work on phase 1 (the easiest one) because I still need to think about the others phases.

Currently I use some Macro (but it only work on Windows and its not perfect).

Requirements:

- Have its own tab in excel (useful for phase 2 and 3)
- Exports all charts in PNG with a default format of 6' by 10' inches
- Have the ability to override default format directly from. the ribbon (Width and Eight field)
- Chart to be exported in an organized way in folders and subfolders using file name and spreadsheet names

I have attached an excel spreadsheet with the charts already exported so you understand what is expected.

This is what is expected when clicking on the export button:

Create folders with charts in it.

Main folder is the name of the Excel file

Sub folders is the name of each spreadsheet

Sometimes subfolders will have subfolders (like the China one) (if possible). If there is a dash in the name it will create another subfolder.

Only create subfolders if a workbooks has charts in it

Charts name to be the title of each chart

Default size for charts exports to be 6 inches by 10 inches

Please let me know if you are interested and have any questions.
