4 required Connects (110 available) ❓

Hello,

I am looking for a front end developer for a 1-2 week project. You must be experienced with .net application development using C# and must be comfortable with developing projects involving graphics.

We have an existing an C# application that plots stocks data using telerik/Radchartview. You will add/modify some features on top of this application. The project itself is fairly simple/straightforward and detailed step-by-step instructions for tweaks that need to be done will be provided.

If you are an experienced C# developer with good work ethic, eye for detail and sound coding practices please apply. We are not looking for the lowest cost developer we can find. We are willing to pay up for high quality work done right.

We are a 5* rated Upwork employer and will offer bonus over our agreed amount and additional work for job well done.

Core skills needed for the project:

- Telerik UI for WPF/Radchartview

$510	**$$$**
Fixed-price	Expert level

Project Type: One-time project

You will be asked to answer the following questions when submitting a proposal:

1. This project pays (agreed amount + bonus) only after fully tested code is delivered. No milestone or escrow payments will be made (a minimum escrow payment required by upwork will be done when we begin). Is this understood and ok?
2. Are you the developer who will be working on this project if selected (no subcontracting)?
3. Is it understood that this project is not available to work on hourly basis?
4. How many months/years of experience you have with C#?
5. If selected when can you start and how many hours/week can you spend on this project?

Skills and expertise

C#

Preferred qualifications

Talent Type: Independent ✅

Location: Bulgaria, Croatia, Ukraine, Romania, Russia, Poland, Bosnia and Herzegovina ❗
